Your Home's Efficiency

Efficiency measures how well your home retains heating and cooling. Here's how your home compares to others in your state. [Learn More](#)

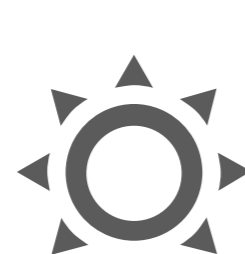

YOUR EFFICIENCY

LOWER

HIGHER

What impacted your energy use in November

Your Home temperature was set to 68, below your state's average of 72. This choice meant your heating ran less.

How to save more in December

Enabling geofencing will make sure that your system turns itself down when you leave the house, saving you money.

Weather and state comparison data presented in this email is based off of the location you provided at initial set up. [Learn More](#) about how to update your location.
