How to start a RedLINK™ conversation
Make more money by asking the right questions

RedLINK Internet Gateway

Questions to ask your customer:
“Did you know you can control your comfort system and get alerts by text or email when you’re away?”
“How often are you or anyone else who lives here away from home?”
“Is remote access to your thermostat important to you?”

TIP: Getting alerts for things like no heat or a water leak can help customers take action immediately and avoid potentially costly damage. It’s like a proactive insurance policy.

Wireless Indoor Air Sensor

Questions to ask your customer:
“Where are the hot or cold spots in your home?”
“Are you happy with the location of your thermostat?”
“Do you want to receive alerts when temperature and humidity are too high or low?”
“Would you like to properly sense humidity in your home?”

TIP: Many homes have a fireplace or oven that can change the temperature near the thermostat. A wireless indoor sensor can be used to average temperature in another part of the house.

Wireless Outdoor Air Sensor

Questions to ask your customer:
“Do you want to see outdoor temperature and humidity information on your thermostat and remotely when you’re away?”
“Is window condensation a problem in the winter?”

TIP: The RedLINK outdoor sensor can be placed in a location that’s protected from the sun, ensuring accurate temperature and humidity readings.
Portable Comfort Control™

Questions to ask your customer:
“Would you like the ability to walk around your home with your thermostat?”
“Do you want to check outdoor temperature and humidity at-a-glance without waiting for your phone’s weather app to load?”

TIP: No matter how complicated the system, the Portable Comfort Control makes interaction easy.

Entry/Exit Remote

Questions to ask your customer:
“Are you in and out of the house on weekends while your system is running all day?”
“How important is energy conservation to you?”

TIP: Customers can save energy with one-touch setback when they leave, and can easily resume their system program when they return. For example, mount by garage door openers for convenience and to save energy.

Vent and Filter Boost Remote

Questions to ask your customer:
“Do you find that smells linger in your home long after you finished cooking?”
“Did you know you can save energy in the summer by recirculating cool air instead of running your A/C?”

TIP: Customers can keep the remote anywhere in the home and use it as needed.
