AIR QUALITY

Why use a bath fan control? A simple switch only allows you to turn the fan on or off. This often leads to one of two situations:

- The fan is left on for extended periods of time which can be an energy concern
- The fan is turned off too soon and can cause unwanted air quality issues including mold build-up and unpleasant odors

The Honeywell Digital Bath Fan Control enables you to control your fan to meet your ventilation needs via easy-to-use programming and a simple timer function. This enables your fan to be more energy efficient while improving the air quality in your bathroom and surrounding rooms.

The Digital Bath Fan Control is offered in 2 colors, Premier White and Biscuit, to best match the design of your bathroom. It also displays current time to keep you on schedule on those busy mornings.

ALLY PLEASING

Proper Bathroom Ventilation

The Home Ventilating Institute (HVI) recommends that the fan should be run for a minimum of 20 minutes after a shower to remove the excess humidity and reduce the issues of moisture in the bathroom.

Using a simple switch to control the fan often leads to either under ventilation of the bathroom or unwanted continuous use of the fan, which creates unnecessary noise and can be energy inefficient.

The Honeywell Digital Bath Fan Control has a timer option built into it that allows you to run the bath fan from 10 minutes to 1 hour at a time. This enables you to control your fan to remove any excess moisture or odors from the bathroom without having to worry about the excess energy use and noise from continuously running the bath fan.

TrueHOME™ comfort solutions

Honeywell TrueHOME comfort solutions bring it all together for you with cleaner and fresher air, proper humidity levels and even temperature control throughout the home. With Honeywell, you'll get the comfortable living environment you want for your family and the energy savings you need for your budget. Consult with your HVAC contractor professional for further information on these Honeywell solutions.
